**Description:** Indicates the origin of the MRO.

**Number of Characters:** 1

**Type of Code:** ALPHA/NUMERIC

---

---

<b>CODE</b>	<b>DEFINITION/EXPLANATION</b>
A	MRO processed through an on-line screen that was manually allocated.
B	MRO data input through on-line screens that will be processed in the next batch cycle.
C	MRO data received into DSS through CICS to CICS interface that will be immediately with pick data generated on line or as a pick interrupt when pick data is pushed to an RF device.
D	An MRO received into DSS through a CICS interface that will be processed in the next Batch cycle.
E	MRO entered through an ICP input screen that was processed as an Immediate release.
F	MRO data received into DSS through DAAS that will be processed immediately with pick data generated on-line or as a pick interrupt when pick data is pushed to an RF device.

<b>CODE</b>	<b>DEFINITION/EXPLANATION</b>
G	MRO entered through an ICP input screen that was processed as a Batch release.
H	An A5J, Condition Code H with Management Code M, J, or T generated through the receiving programs. The DRO is processed immediately through the Issue From Receiving and MILSTRIP issue programs with an IRRD printing at the receiving terminal printer.
I	MRO data input through on-line screens that will be processed immediately with pick data generated on-line or processed as a Batch release.
J	Household goods transshipment that was entered through the TCN Tranship Screen (STIG).
L	A MRO Received into DSS through Issue From Receiving, which has been inducted into a location that will be processed with pick data generated through Batch Processing.
M	MRO data received into DSS through DAAS that will be processed in the next Batch cycle.
N	Post – Post
P	A pre-positioned transshipment record (DIC=ZWT). Will be found on the MRO Reject Record only.

<b>CODE</b>	<b>DEFINITION/EXPLANATION</b>
R	A MRO received into DSS through Issue From Receiving which has not been inducted into a location and that will be processed immediately with pick data generated on-line to the receiving terminal printer.
S	A MRO received into DSS through Issue From Receiving, which has been inducted into location and that will be processed immediately with pick data generated on-line or as a pick interrupt if data is pushed to an RF device.
T	Transshipment data (DIC=ZWT) that is processed into DSS through on-line screens.
U	An A5J MTIS DRO, under \$50 total value, generated through the receiving programs. The DRO is processed immediately through the Issue From Receiving and MILSTRIP programs with an IRRD printing at the receiving terminal printer.
X	MRO history records that have been converted from another system.
Z	Inbound GBL data.
